

## Research Partnership Support

---

**Partnership support from Bayer CropScience LP (Bayer), ENVU, and Syngenta to fund environmental sustainability research by IVM Partners to document best integrated vegetation management practices that restore pollinator, bird and wildlife habitats on electric, natural gas, highway and railroad rights-of-way and on solar and wind farms. The multi-year project tracks botanical changes based on management techniques and qualifies the relative nectar and pollen benefits to native bumble bees and lepidopterans (moths and butterflies) by using pollinator site value indices (PSVI). The research in upland and wetland ecosystems is shared at national and regional conferences and provided to State, Tribal and Federal agencies to guide habitat recommendations.**

The Corporation is operated exclusively for charitable, scientific, literary, and educational purposes to develop, educate professionals and the public with respect to, and apply best integrated vegetation management practices
